NOTES; the Wilcap Company Ford Flathead Replacement Main caps have been in production for more than 40 years. They are cut from solid steel plate then CNC machined in 8 operations. The steel versions weigh in at a hefty 3 1/4 pounds each! They are cut at .030" undersize to allow ample material for line boring. The washer pads are machined to accept extra heavy washers. They are sold as a set front and center or the center cap only. Specials are available on request.
