NOTES; The 392-EFM places the starter on the drivers side of the engine block. It comes drilled for the Ford EFM bellhousing bolt pattern. We can supply sources for a replacement mini starter, the Ford clutch disk and the throw out bearing. The stock starter adapter plate is retained and the stock starter can be used*. Wilcap can also fabricate a new steel or aluminum flywheel or recondition your flywheel (surface and re-drill for correct clutch bolt pattern). Complete instructions are included. We do not supply information regarding engine or transmission installation in to specific frames, bodies, etc. This is the responsibility of the customer and care should be taken to address the issues of motor and transmission mounts, driveline, body and frame clearance, gear ratios, etc. BEFORE the purchase of the engine to transmission adapter. We can assist you with information and dimensions prior to the start of your project so feel free to contact us with any questions.

*Contact Wilcap for list of compatible starters – Some year/transmission starters will not work
